

Munyaroo 'south section'
Fauna Survey
on central coastal Eyre Peninsula
Thursday 29th September to Monday 3rd Oct 2022

Participants welcome on other dates from Thursday.
Two WD vehicles to campsite.

Totally BYO camping, food, water, camp gear.

Please take personal insect protection.

**Registration and current financial
FNSSA membership required**

Co-ordinated by Adrian Uren Mobile: 0450061735 Email: adrianuren1@gmail.com if you intend to participate or further information is needed. Campers must be members of the FNSSA.

To register our usual Survey Registration Form will need to be completed and returned.

No mobile reception at campsite. Closest mobile reception along Lincoln Highway.

Travel towards Cowell along the B100 Lincoln Highway for 90 kilometres before taking Guidera Road towards the coast and campsite

From B100 Lincoln Highway to campsite is 23 kilometres after turning east along Guidera Road, which becomes Block 17 Road. Munyaroo CP 'south' section has no internal safe vehicle tracks, as the 4WD tidal flat tracks are slippery and prone to tidal inundations. The western boundary track is on the farming side and comes to a 'no thorough way', and no additional boundary gates exist to enter the Munyaroo 'south' section. Fauna Survey campsite and survey trapline sites are on higher accessible soils near campsite. FNSSA signage will be posted from the Highway / Guidera Road intersection for survey participants.

Participants will need to make their own travel arrangements.

Shared 4WD from the campsite to the nearby pitline sites is usual and expected.

**Reptile &
Frog
Group**

This third fauna survey within the region aims to identify reptile and small mammal biodiversity for several vegetation habitats within Ironstone Hill Conservation Park and Munyaroo Conservation Park on the Central Eyre Peninsula. The three target species include the Thorny Devil (*Moloch horridus*), the Sandhill Dunnart (*Sminthopsis psammophila*) rated vulnerable (NPWSA ACT STATUS) and endangered (EPBC ACT STATUS), and Dwarf Four-toed slider (*Lerista distinguenda*) rated as rare (NPWSA ACT STATUS). We will be using traplines, Elliot traps, cage traps, motion camera traps and bat detectors. This looks to be an exciting and important opportunity to improve the knowledge of the biodiversity of this region.

ABOVE: from B100 Lincoln Highway to campsite is 23 kilometres after turning east along Guidera Road, which becomes Block 17 Road.

Shared 4WD from the campsite to the nearby pitline sites is expected. Participants will need to make their own travel arrangements.
